

SP SpartiumCooler

Previous generation products

Key benefits

- Cheaper to ship and install
- Water saving
- Top hygiene control

SP SpartiumCooler characteristics

TrilliumSeries cooler Counter flow, adiabatic pre-cooling, axial fan, induced draft

Capacity range

340 - 1560 kW

Maximum entering fluid temperature

60°C

Typical applications

- Small to medium HVAC and industrial applications
- Locations with limited water and space availability
- High temperature industrial applications

Cheaper to ship and install

- SpartiumCoolers fit on standard trucks.
- Pre-coolers are factory-installed and small cranes are all you need to mount coolers on-site.

Water saving

 SpartiumCoolers achieve annual water savings exceeding 80% water compared to normal cooling towers by limited adiabatic operation.

Top hygiene control

- Featuring a **once-through system**:recirculation and stagnation of water eliminated.
- No stagnant water: pre-cooler water conveyed from pads to sewer via a gutter.
- No aerosol formation: SpartiumCoolers minimize the Legionella risk.
- SpartiumCoolers cool incoming air without transferring water to the dry coil.

Boosting thermal performance

- Pads in front of the finned coil pre-cool air to virtual wet bulb temperature.
- **Up to 40% improved capacity** compared to dry cooling.
- SpartiumCoolers consume less energy
- SpartiumCoolers achieve low process temperatures.
- Try the cooler with **EC motor** and improved pre-cooler performance resulting in **lower sound levels** and **25% lower electrical consumption**.

Interested in the SpartiumCooler for cooling your process? Contact your local <u>BAC representative</u> for more information.
