## Open cooling towers

## Options and accessories

## **Remote sump connection**

To protect sump water from freezing you can use an auxiliary remote sump within a heated space.

Using a remote sump

- guarantees year-round reliable operation
- helps improve system hygiene

Just follow some simple guidelines when <u>selecting your remote sump tank</u> for a VT0/1 cooling tower. The <u>following data</u> will help you calculate the cooling tower volume, the system piping volume and the system component volume.

Want to use a remote sump? Contact your local BAC representative for guidance.
